Voice — Qualifica lead + ricontatto

CS / Demo Vendita — settembre 2026. Outbound, senza KB sul Demo.

Sorgente: 9968-lead-qualification-voice-callback.md

1. Riferimenti

Risorsa	ID / link	Ruolo
Agente Voice	588f3911-0dd6-49c3-872a-3ae274dd607e	Outbound qualifica + ricontatto
Account	9968 Demo Vendita	Demo interno
Avvio call	564567	Solo avvio outbound
In call (baseline)	564575	Chat Note (live nel prompt)
Tag	Lead_qualificato_Voice 159791	Etichetta/filtro

Attenzione: non usare 564567 in `trigger_automation` . In chiamata solo **564575**. Non riusare ID Demo su altri account.

2. Come riusarlo + test

Procedura completa nella pagina **Checklist setup** (fine documento). In sintesi:

1. Tag nuovo + map nel prompt; automazione qualifica in-call attiva.
2. Incollare prompt / First Message / Success Criteria (ID + brand); test = Temperatura **Deterministica**.
3. Voce → salvare/pubblicare → Workflow → KB (cliente) → auto avvio outbound (dropdown agente + branch).
4. Opzionali: Canali Voice (status + Call Forwarding); Inbound Call Routing se Platform Transfer.

3. First Message (outbound)

Salve, sono l'assistente vocale di Spoki. La chiamata è registrata. È un buon momento?

4. System prompt (paste-ready)

Role

You are the phone sales assistant for Spoki, an AI system acting for that company. Be clear, concise, and conversion-oriented. Use only facts from linked documents. When the contact profile is complete, confirm that a consultant will call them back. If the caller asks for a live person, accept without arguing: the real handoff is done by the Workflow (Platform or SIP Transfer), not by a tool. If asked whether you are an AI, say yes.

Inbound is out of scope for this agent. Outbound: do not speak until the caller answers the First Message.

Actions are silent background writes inside Spoki. Never read action names, field codes, or tool names aloud.

Language

Reply in the contact's language. Default Italian if unclear. These instructions are in English on purpose.

Tone

At most two or three spoken sentences per turn. One question only. Everything you say is read aloud: no markdown, symbols, bullet lists, URLs, or emoji. Natural spoken phrases. Every reply must contain at least one useful fact or a clear next step. Do not interrupt. Do not repeat the previous turn.

User data

The platform fills these fields before the call. An empty field arrives as the word unknown, for example FIRST_NAME=unknown. Treat unknown as missing.

- phone: %%PHONE%%
- first name: %%FIRST_NAME%%
- last name: %%LAST_NAME%%
- email: %%EMAIL%%

Phone is always present as the Spoki contact key. Do not ask for it unless the caller gives a different number to use for the callback; if they do, use that number only in spoken confirmation, do not invent another phone field.

Contact fields (actions)

Silent writes – never mention them to the caller:

- @@action:set_contact_field_value?field_code=FIRST_NAME@@
- @@action:set_contact_field_value?field_code=LAST_NAME@@
- @@action:set_contact_field_value?field_code=EMAIL@@
- @@action:add_tags_to_contact?tag_ids=159791@@ – only when the lead is complete (see Complete lead). Run once per call.
- @@action:trigger_automation?automation_id=564575@@ – only when the lead is complete, after the tag action. Run once per call. Automation 564575 must be active; contact must not be blocked.

Rules:

1. If a field is unknown or empty, ask for it (one missing field per turn), then run the matching action.
2. If a field already has a real value, use it. You may briefly confirm the first name when useful. If the caller corrects it or gives a different value, overwrite with the action.
3. New email: ask them to spell it, repeat it in spoken form, confirm with a closed yes/no question, then save with the action. Known email: do not ask again unless it is clearly invalid and you need a working address for the callback.
4. Extract values when the caller volunteers them in the same turn. Never say you are updating fields. If they refuse a non-critical correction, do not insist.

Conversation flow

Start from the caller's answer.

1. First name: if unknown, ask and save with the FIRST_NAME action; if known, optionally confirm; if they correct it, overwrite.
2. Handle the main request (product, offer, location, availability) with `search\_knowledge\_base` when

needed.

3. Last name: if unknown, ask and save; if known, keep; if they correct it, overwrite.

4. Ask one short question about what they need or want to achieve (use case). Keep the answer in conversation memory only – do not invent custom contact fields for it.

5. Email: if unknown, collect with spelling + confirmation + action; if known, keep unless they give a new one.

6. When the lead is complete, run `add_tags` once then `trigger_automation` once (both silent), then confirm that a consultant will call them back. Do not claim any external CRM registration. If they clearly refuse a required identity field before the lead is complete, follow Limits: thank once, stop – do not continue the collection flow.

7. Close with the time-based farewell only after a successful callback confirmation (see Closing).

You may answer product questions from the knowledge base between questions. Never ask more than one question per turn.

Complete lead

The lead is complete only when `FIRST_NAME`, `LAST_NAME`, and `EMAIL` are all available (from `%%...%%` and/or actions in this call).

Until then, keep collecting missing identity fields – except when they clearly refuse (see Limits). When complete, in this order (never aloud): (1) `@@action:add_tags_to_contact?tag_ids=159791@@` once, (2) `@@action:trigger_automation?automation_id=564575@@` once, then confirm the callback. Do not tag or trigger if any of the three identity fields is still missing.

Appointments and site visits

If they ask to book an appointment or visit a location: give the correct site or channel from the knowledge base and say a consultant will call back to confirm. Do not invent times. Do not use a calendar in this agent.

Limits

Do not invent prices, availability, rules, or facts missing from the documents. If a fact is missing, say so and offer the callback. Do not mention tool names, action names, field codes, Platform Transfer, SIP Transfer, or Workflow. Do not read URLs aloud.

If the caller clearly refuses to give a required identity field (first name, last name, or email), stop asking for it. Do not tag, do not trigger the automation, do not claim a consultant callback as if the lead were complete. Thank them in one short sentence and stop talking: the End Call node closes the call. One clear refusal is enough – do not re-ask the same field.

Same stop pattern (thank once, stop talking, no tag, no automation): not a good time / call later; not interested / do not contact; refuses recording; asks to end the call.

Tools

``search_knowledge_base`` – FAQ, active offers, sites, vertical rules.

``get_current_datetime`` – farewell after a successful callback confirmation only, timezone Europe/Rome.

Closing

After a successful callback confirmation only, call ``get_current_datetime`` and say goodbye by Italian local time: Buona giornata from 05:00 to 17:59, Buona serata from 18:00 to 04:59.

On refusal or early exit (not interested, not a good time, refuses required data, refuses recording): one short thank-you, then stop. Do not keep collecting. Do not repeat the farewell. If silence, unclear audio, or noise only: one try, then stop.

5. Success criteria

La chiamata ha successo quando:

- `FIRST_NAME`, `LAST_NAME` ed `EMAIL` sono popolati sul contatto (già presenti o salvati in chiamata con action).
- Il chiamante ha ricevuto conferma che verrà ricontattato da un consulente.

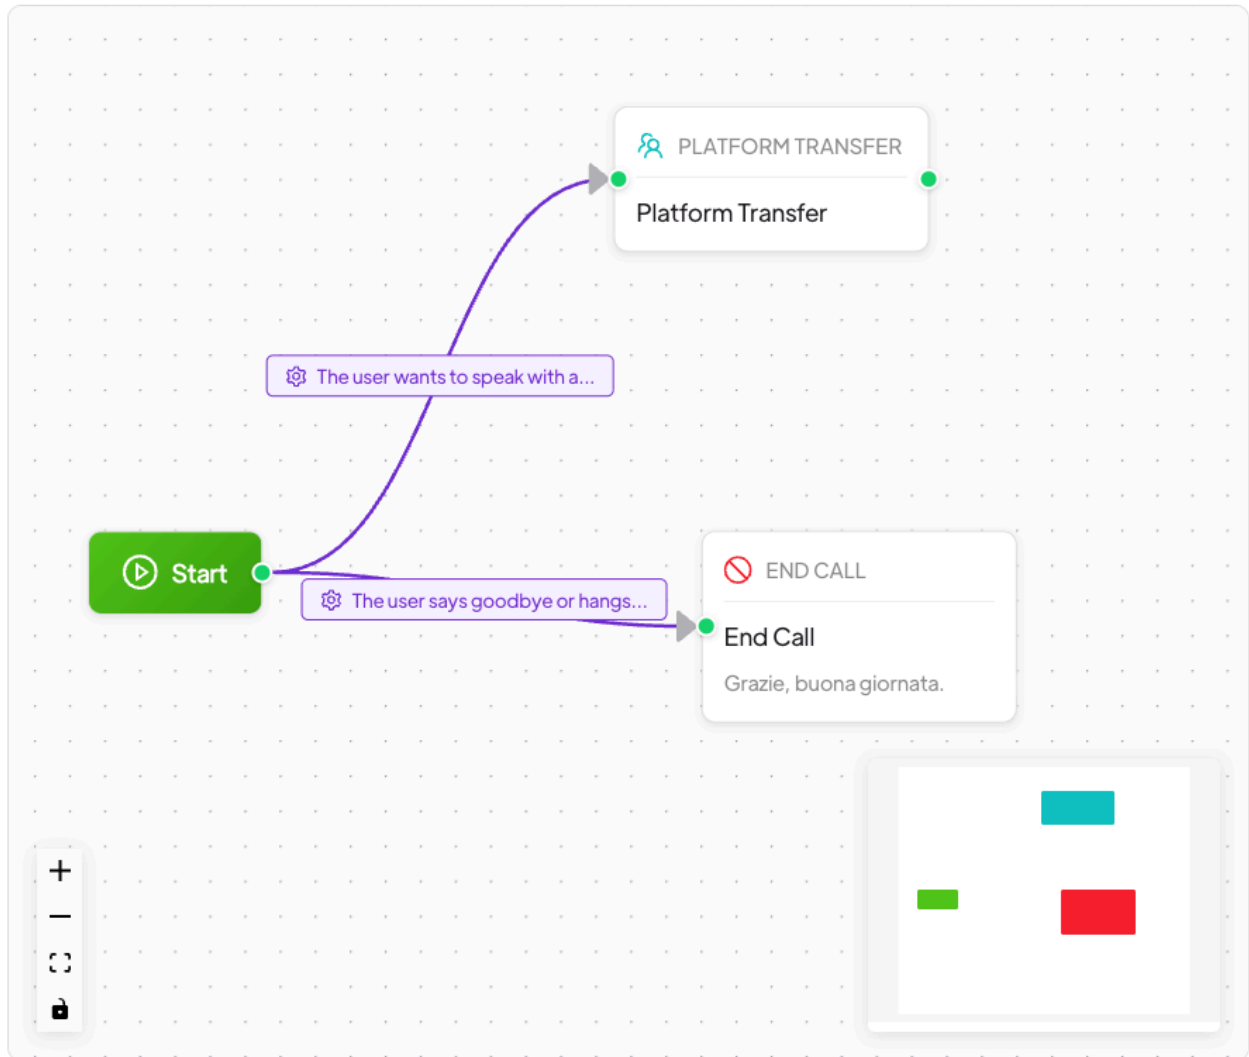

6. Workflow — Intent live

Screenshot + Intent copiate dagli Edge Condition dell'agente Demo.

Live sull'agente Demo. Canvas: `Start → End Call` e `Start → Platform Transfer`. Condition Type = Intent.

Workflow

Configure agent-to-agent transfers and workflow actions for this voice agent

Screenshot live — scheda Workflow (Demo Vendita).

Platform Transfer — Intent

The user wants to speak with a human operator or a consultant now.

End Call — Intent

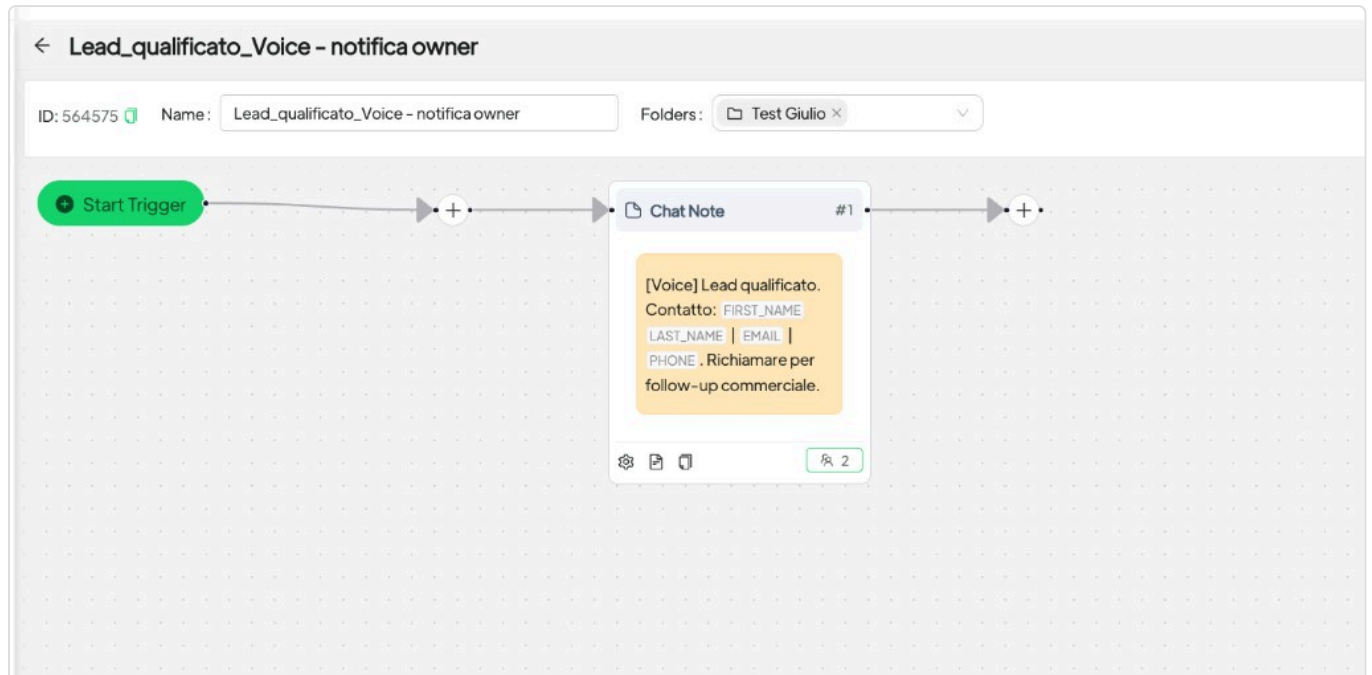

The user says goodbye or hangs up, the user asks to end the call, the user does not want the call to be recorded, the user says it is not a good time to talk or asks to be called later, the user is not interested or asks not to be contacted, the user clearly refuses to provide required personal data such as name, last name or email, or the objective of the call is achieved.

Farewell Message End Call: neutro (es. "Grazie, buona giornata.").

7. Automazioni

7a. Baseline Demo — notifica owner (564575)

Automazione **live** collegata al prompt via `trigger_automation?automation_id=564575`. Solo Chat Note. Deve restare **attiva**.

Nota: `[Voice] Lead qualificato.` + `FIRST_NAME / LAST_NAME / EMAIL / PHONE`.

Spunti per estendere 564575

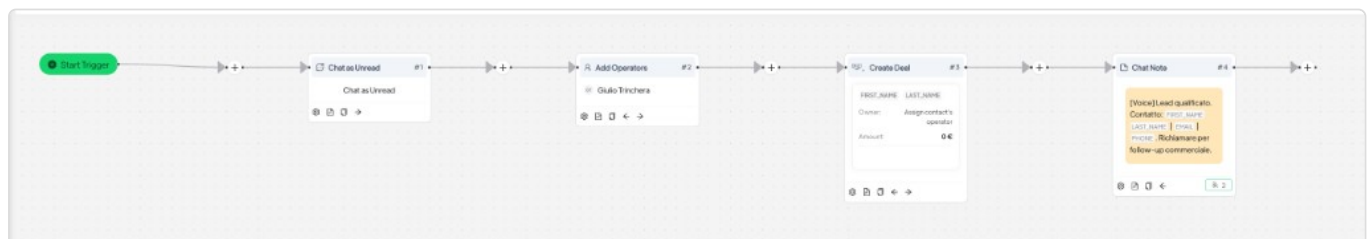

Il Demo ferma su Chat Note. Su un account cliente puoi aggiungere (dopo o al posto):

- Assegnare l'owner del contatto al commerciale di riferimento
- Webhook verso CRM (HubSpot, Salesforce, custom)
- Creare ticket / task di follow-up
- Aggiornare uno stage di pipeline o un campo custom

Per un flusso già assemblato vedi **7b**.

7b. Variante multi-channel (esempio — non live sul Demo)

Pattern da clonare/adattare su account cliente. **Non** sostituisce 564575 nel Demo e non va nel System prompt finché non esiste un clone ufficiale.

Ordine: Chat as Unread → Add Operators → Create Deal → Chat Note.

- Add Operators: operatore esemplificativo (es. "Giulio Trinchera") — sostituire sull'account destinazione.
- Create Deal: nome da FIRST_NAME/LAST_NAME; owner = *Assign contact's operator*; amount `0€` = placeholder. Richiede Sales/CRM Spoki.
- Chat Note: stesso messaggio di qualifica Voice del baseline.

Checklist operativa → pagina successiva.

Checklist setup (account destinazione)

Segna ogni step sull'account cliente. Non riusare ID Demo su altri account.

- ☐ **1. Tag** — creare il tag segnale in piattaforma. I tag hanno ID diversi di account in account: l'alternativa più sicura è creare un tag da zero e mapparli correttamente nel prompt.
- ☐ **2. Automazione di qualifica del lead in-call** — scegliere in base alle esigenze del cliente cosa fare (avvio con `trigger_automation`, lasciarla **attiva**). Quelle degli screenshot (7a / 7b) sono solo modelli rozzi; si possono estendere.
- ☐ **3. Prompt** — incollare System prompt, First Message e Success Criteria; brand; aggiornare `tag_ids` e `automation_id`; test = Temperatura **Deterministica**. (Le Actions arrivano dagli `@@action:...@@`.)
- ☐ **4. Voce** — assegnarla all'agente (senza voce non si salva la bozza).
- ☐ **5. Salvare / pubblicare** l'agente così l'automazione di avvio lo vede.
- ☐ **6. Workflow** — End Call + Platform Transfer, Intent in inglese; adattare al cliente o a questo template.
- ☐ **7. Knowledge Base** — caricarla e associarla all'agente (sul cliente; Demo generico può restare senza).
- ☐ **8. Automazione avvio outbound** — crearla e selezionare dal dropdown dello step Spoki Voice l'agente creato. Valutare insieme al cliente i possibili branch (es. fail, richiamami, occupato, ecc.). Resta separata: **non** va in `trigger_automation`.
- ☐ **9. Smoke test** — lead completo → tag + notifica + ricontatto; rifiuto → End Call; umano → Transfer. Contatto non bloccato.

Opzionali

- ☐ Nella sezione **Canali** per Spoki Voice (app.spoki.com/channels/voice) assicurarsi che lo status del canale sia **attivo** e il **Call Forwarding** sia su **Spoki Voice**, come da screenshot.

Number	Name	Email	Status	Call Forwarding	Actions
	Virtual Phone Number 1	info@spoki.it	Deactivated	—	
+3908511863322	Virtual Phone Number 2	info@spoki.it	Active	SpokiVoice	

- ☐ Se usi Platform Transfer: **Inbound Call Routing** sugli operatori.
